

Throwdown Gym Grid System

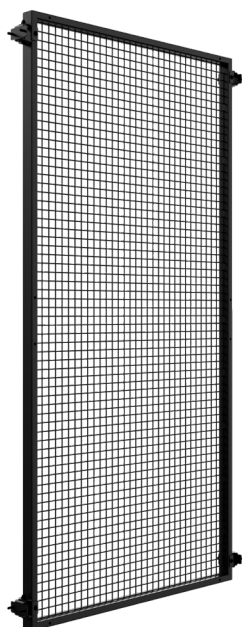

The Throwdown Gym Grid is a modular panel system that gives operators a new way to design the training floor. Pair the Single Grid with a half rack and move it anywhere the space demands, no longer boxed in by limited wall space or a view worth keeping open. Add the mirror and the lifter gets a visual cue for form, plus an extra layer of separation from whatever's on the other side. Scale to Double, Triple, and beyond to divide any zone. Connect additional grids end to end, turn a 90 degree corner, or run the Single Grid horizontal for guided separation. This is how operators push the boundaries of the floor.
